

# EL BOSQUE DE LO DIMINUTO

Sol Undurraga

Centro Cultural La Moneda invites you to visit the exhibition *El bosque de lo diminuto* by the illustrator Sol Undurraga and curated by the editor Marcela Fuentealba. The purpose of this material is to contribute to the encounter of boys and girls with art, providing tools for aesthetic experience, play and reflection.

Sol's artistic work invites to explore a forest, the habitat with the greatest interaction of diversity on the planet, from its small inhabitants, to show that all living beings depend on each other.

On this tour, we invite you to explore an extraordinary forest, observe each of its corners and learn about the species that live in it.

WHERE HAVE ALL THESE  
SMALL ANIMALS, PLANTS  
AND BUGS THAT LIVE IN  
THIS FOREST COME FROM?

HOW DO YOU THINK THEY  
CAME TO LIVE HERE?

WILL THEY HAVE CAME  
OUT OF THE EARTH OR  
THE WATER?

HOW DO YOU THINK THEY  
GET BETWEEN THEM?

WHAT WOULD HAPPEN IF  
ONE DAY THEY WERE NOT?

## **EIGHT-LEGGED LIFE**

Stand under the spider in the living room and observe it very carefully.

One of the most remarkable characteristics of spiders is that they are great silk producers. They make this silk inside their bodies and then, they push it outwards. Spiders are famous for the webs they create, but not all use them to catch food, some use them to build their burrows or protect their eggs.

HOW MANY LEGS DOES  
IT HAVE?

WHAT IS ITS COLOUR?

DO YOU KNOW HOW MANY  
EYES A SPIDER HAS?

WHAT MAKES  
SPIDERS SPECIAL?

---

---

### **TEAM WORK**

Crouch down and look for the ants that are working in this forest.

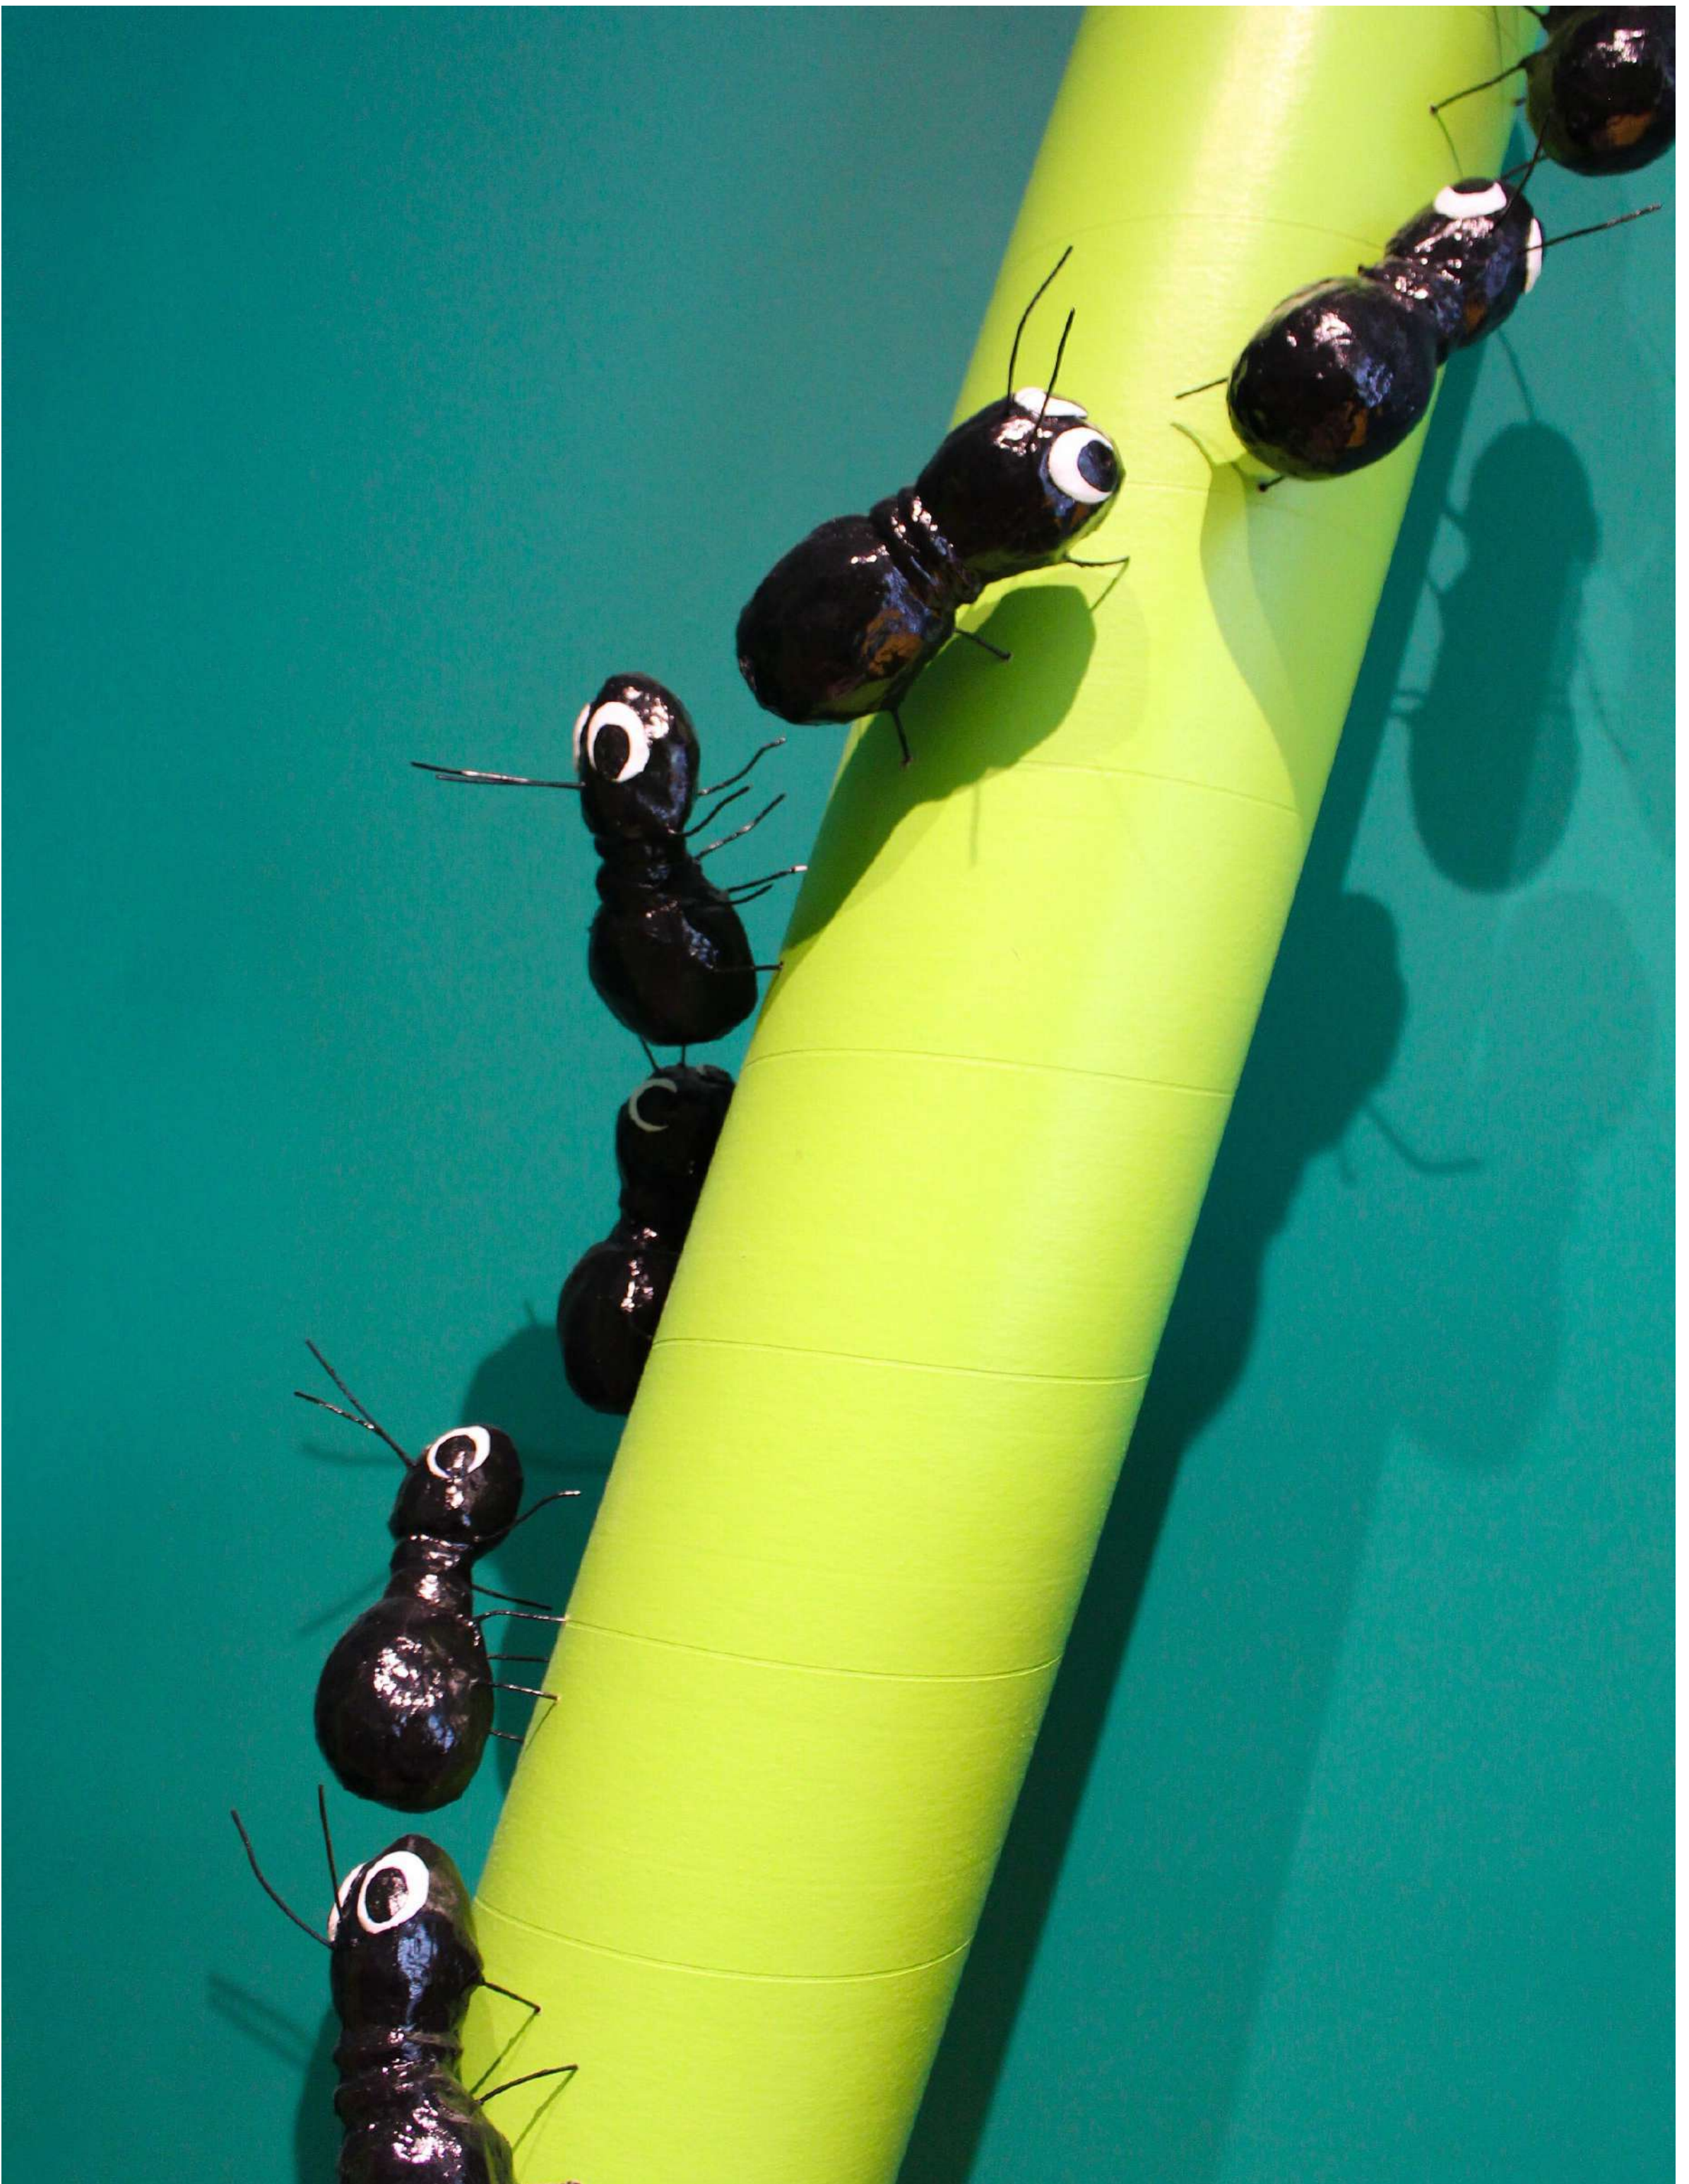

They plant them! These powerful little bugs eat a very special type of fungus, which they grow in underground burrows. This fungus needs plants to be able to grow, hence, when ants cut leaves in nature, they help to open the forest floor for new plants to grow.

ARE ALL ANTS THE SAME?

WHICH COULD BE EACH  
ONE'S DUTY?

WHAT DO LEAF CUTTER  
ANTS DO WITH ALL THOSE  
PIECES OF LEAVES THEY  
BITE OFF FROM TREES?

---

## 03

---

### **THE WOODPECKER**

Knock, knock, knock! It is the sound that the woodpecker makes when its beak hits the trees.

Look inside this forest for other birds, some are resting and others watching from the sky.

The woodpecker carries out important functions within a forest. This bird builds holes in trees, which it uses as a burrow for its family or to rest. When it decides to change nests, they are used by other animals that cannot build this type of burrows to protect themselves from the cold of winter.

WHAT BIRD SOUNDS DO  
YOU KNOW?

SEARCH WITHIN THIS  
FOREST FOR OTHER BIRDS,  
SOME ARE RESTING AND  
OTHERS PROTECTING FROM  
THE SKY

CAN YOU IMAGINE  
WHAT IS THE SOUND THEY  
MAKE TO COMMUNICATE?

---

---

## THE YELLOW SNAKE

The snake is an animal that can smell with its tongue, see heat, and hear with its mouth. It moves its long pink tongue to feel the air, the ground or the water and be able to move.

Some snakes cannot see well and that is why they can feed with other senses using two small holes right in front of their eyes.

WHICH SENSES DO YOU USE  
IN ORDER TO LEARN?

CAN WE LEARN USING OUR  
HANDS OR OUR TONGUE?

IN WHAT WAYS CAN WE  
PERCEIVE THE FOREST  
WITH OUR SENSES?
